(9) Federal Highway Administration: “Lighting provides the benefit of improving safety for motorists and pedestrians; however, it also has a larger impact on our nighttime environment. Ongoing research demonstrates the impact of lighting at night as it relates to human health and to the condition of wildlife and plant life. As a result, revisions are being made in our approach to light control and recommended lighting levels. This research also affects the decision- making process on whether, and where, lighting is beneficial.” Section 5, FHWA Lighting Handbook 2012.
